E-mail enquiries:
humquery@sanger.ac.uk Clone requeste: clonerequest@sanger.ac.uk
On Oct 6, 2000 this sequence version replaced gi:10129439.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: FMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 10, constructed by the Sanger Centre Chromosome 10

This sequence is the entire insert of clone RP11-19501 The true left end of clone RP11-453G10 is at 166973 in this sequence. The true right end of clone RP11-15A24 is at 6540 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality such an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

NOTE: This is a "working draft' sequence. It currently
consists of 8 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          be preserved.

clone. It may clone sections This sequence may not represent the entire insert of this It may be shorter because we only sequence overlapping sctions once, or longer because we provide a small overlap neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Joh
McPherson, Department of Genetics, Washington University,
MO. For additional information about the map position of
sequence, see http://genome.wustl.edu/gsc y, St. ı D. et. Louis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           966
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      906
Submitted (24-JAN-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 ISA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jan 22, 2001 this sequence version replaced gi:I1863400.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              787

corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known amnotated repeat sequence elements. Where the sequence is anmotated repeat sequence elements where the sequence is repeated by the following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome 10, constructed by the Sanger Centre Chromosome 10 mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr10

This invention describes a novel method for inducing apoptosis which comprises overexpressing the CID gene (I). The method is particularly used to treat tumors and can also be used in gene therapy. The method has no side effects on normal cells (contrast known methods of inducing apoptosis such as cytotoxins and radiation), and may be effective on cells resistant to conventional treatments. Overexpression of (I) is sufficient itself to induce apoptosis but the effect may be increased when used in combination with other anti-tumor methods. When cells transfected with (I) undergo apoptosis, they release factors that kill neighboring, non-transfected cells (bystander effect). This sequence represents the human CID protein described in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAO15405 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ftp.wipo.int/pub/published_pct_sequences.

```

The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating gene involved in cellular functions, such as: regulation of metabolism and

ng genes

The invention relates to an isolated polynucleotide encoding a nuclear receptor cofactor, also known as CF6. The polynucleotide or encoded protein is useful for construction of multiple nuclear receptor cofactor specific sequence alignments, preferably for the construction of protein sequence alignments. The protein is useful for screening agents capable of inhibiting the cellular function of the Cofactor CF6. The polynucleotide is useful for making vectors and for transforming cells, both of which are ultimately useful for production of the CF6 protein. They are also useful as scientific research tools for developing nucleic acid probes for determining expression levels of the cofactor gene, e.g. to identify diseased or otherwise abnormal states. They are particularly useful for diagnostic purposes to e.g., identify deleted or mutant CF6
                                                                                                                                                                                                                                             Polynucleotide and polypeptide of novel nuclear receptor cofactor useful for screening drugs regulating cofactor-associated physiological responses e.g. hormonal dysfunctions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present amino acid sequence represents the mammalian nuclear receptor cofactor CF7
                                                                                                                                                                                                               Claim 12; SEQ ID NO 3; 97pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genes; or their measure expression. They are useful for developing analytical tools such as antisense oligonucleotide for selectively inhibiting expression of the cofactor gene to determine physiological responses. The protein is useful for screening drugs for agonist and antagonist activity, and therefore, for screening for drugs useful in regulating physiological responses associated with the cofactors such as metabolic disorders, immunological indications, hormonal dysfunction, neurosystemic diseases. The proteins are also useful for developing antibodies for detection of the proteins. The polymcleotide can be used to design primers for a polymerase chain reaction and are also used to model the three-dimensional structure of the protein. This sequence represents the CF6 protein as the sequence differs from the CF6 protein sequence given in Fig 3 (also designated as SEQ ID NO: 2) of the specification).
                                                                                                                                                                                                                                                                                                                                                                                                                             14-AUG-2001; 2001US-0312147P.

The invention discloses a composition comprising two

or more isolated

Claim 1; Page; 1017pp; English

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel method for inducing apoptosis which comprises overexpressing the C1D gene (I). The method is particularly used to treat tumors and can also be used in gene therapy. The method hapoptosis such as cytotoxins and radiation, and may be effective on sufficient itself to induce apoptosis but the effect may be increased transfected with (I) undergo apoptosis but the effect may be increased transfected with (I) undergo apoptosis, they release factors that kill represents the murine C1D protein described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 141 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present amino
    The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated
                                                                                                                                                                                                                                                                                       New nucleic acid that is a 5' expressed sequence tag (5' EST) obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and diagnostic, forensic, gene therapy and chromosome mapping processing the contract of the contract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; 5' EST;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences
                                                                                                                                                                                                                                                                                                                                                               gene expression analysis, for identifying or charac splicing events, for assessing genomic alterations
                                                                                                                                                                                                                                                                                                                                                                                             New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             03-APR-2002; 2002US-00029386
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-APR-2002; 2002US-00029386.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
```

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately

Claim 45; SEQ ID NO 28364; 80pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              _{5}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cc and addressably isolatable or amplifiable from the plurality), a single cx exon microarray for measuring human gene expression, a method of contiguous human gene expression, a method of contiguous amino acids of any of the above. Mentioned amino acid so fany of the above. Mentioned amino acid so fany of the above. Cc sequences (optionally with conservative amino acid substitutions), an cc methods of selling and/or licensing single exon probes or microarrays to contiguous mino acid subscription, and a computer-readable cited above. Cc a customer desiring to measure gene expression, a method of providing cc storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe ct tissues to detect the probes may be used as tools for surveying cc specific exon, or in constructing genome-derived single exon probe specific exon, or in constructing genome-derived single exon microarrays. Cc alternative splicing events, in detecting and characterising gross caller genomic locus that includes their exon, in assessing cc aniler genomic alterations, in priming the synthesis of nucleic acids, cn expressing the ORF-encoded peptide. The present sequence is a human cc obtained in electronic format directly from uspro data for cobained in electronic format directly from uspro at was ccc sequata.uspto.gov/sequence.html?DocID=20030194704
